CORPORAL SIMONE COLE
Reality Hacker

NAME	SIMONE COLE
HEIGHT	173 CM
WEIGHT	58 KG
AGE	21
EYES	GREEN
HAIR	GINGER
BLOOD GROUP	AB -
TEAM POSITION	SUPPORT
SPECIALITY	REALITY HACKER

HISTORY

Corporal Simone Cole was raised in Silicon Valley to parents who both worked as computer programmers. At the age of four, Cole was diagnosed with mild autism. Her parents refused to consider their daughter as handicapped and chose to home school her. She developed a prodigious intellect, displaying an astonishing aptitude for mathematics, logic and physics. By fourteen she was accepted to MIT. By nineteen she had published a book on chaos mathematics. She was hired as an NSA code breaker before she could legally drink. She has memorized pi up to 5,300 digits. Cole is smart.

RECRUITMENT

Paranormal phenomenon such as "missing time", mass hallucinations, and the spontaneous teleportation of personnel and equipment caused havoc with NSA operations in the months following Cole's recruitment. Her CO passed on data and the DOW was called in to make covert assessment. After identifying Cole as the source she was enlisted immediately into active duty. Her talent has since been further enhanced. Using principals from Cabalistic mathematics and chaos theory, Cole serves as the Jericho team's "reality hacker" to alter space and time to their benefit.

OCCULT RESOURCES

Cole's gifts are purely intellect based: she has no psychic powers other than an incredible level of intelligence that allows her to work extremely complex mathematic problems in her head. Augmented with a wearable computer, gesture-based UI, and HUD interface, she runs custom-made Cabalistic and chaos mathematic sequences that have a profound effect on the physical world. She is able to both slow down time briefly and deploy 'firestorm' which intensifies the team's firepower for a short period.

COMBAT RESOURCES

Cole's harness is taken up largely by the custom-built computer that she uses to run her Cabalistic programs. The computer casing and harness, built to her spec by DOW R&D, has been tested to withstand a drop from over 13 feet and can easily withstand concussive forces equal to a grenade only 7 feet away. Nonetheless, Cole equips herself with low-report weaponry that is unlikely to jar or interfere with her computer systems. She carries a light-weight X-86 submachine gun modified with a scan feature built into the two-range scope allowing her to identify enemies hidden in the immediate vicinity and identify any vulnerable points.

PRIMARY WEAPON:

9mm X-86 submachine gun

SECONDARY WEAPON:

Concussion grenades with 4 different adjustments: impact, time, proximity or remotely triggered
